

LaserSharp® Microwavable Features:

LaserSharp FlexPak Services offers noncontact laser processes to create self-venting and steam release microwavable packages. Advanced LaserSharp® technology makes this unique feature possible, and we guarantee results in the size, location, and consistency of laser scored features or perforated holes.

By adding microwavable features to your flexible packaging material, you increase the value and convenience of your product, and eliminate extensive food preparation time.

Microwavable packaging has never been easier to achieve. All laser processes and the services provided at LaserSharp FlexPak Services create convenient and user-friendly options for the flexible packaging industry.

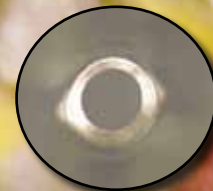

Let the experts at LaserSharp FlexPak Services assist you in creating self-venting microwavable packages with added value.

**Partial Penetration:
Hermetic Venting**

**Complete Penetration:
Venting Slits**

**Perforating for
Microwavable
Packaging**
